

New thermal insulating roof coating approaching market

- Svenska Aerogel Holding AB (publ) cooperates with La Celtique and Novcoat

French manufacturer La Celtique has in pioneering cooperation with Svenska Aerogel and distributor Novcoat developed a new insulating roof coating with Quartzene®, now approaching market.

This thermal insulating coating is their first readymade product with Quartzene®, evaluated through CSTB (Centre Scientifique et Technique du Bâtiment), certifying that the product meets all requirements.

Thermal insulating roof coating products with Quartzene® combine reflection and insulation to lower the temperature indoors during hot days. This can reduce the use of air conditioning and meets the increased demands in Europe for improvements in energy performance for buildings.

The EU's [Energy Performance of Building Directive](#), that was implemented from April this year, sets demanding targets for both new construction and renovation of existing buildings.

- We are very pleased with Svenska Aerogel and their distributor NovCoat and hope that our product will be a success in the market. The product meets all environmental requirements essential for this type of coating, Olivier Belloeuvre, La Celtique.
